

# Chapter 4

## Introducing Dreamweaver

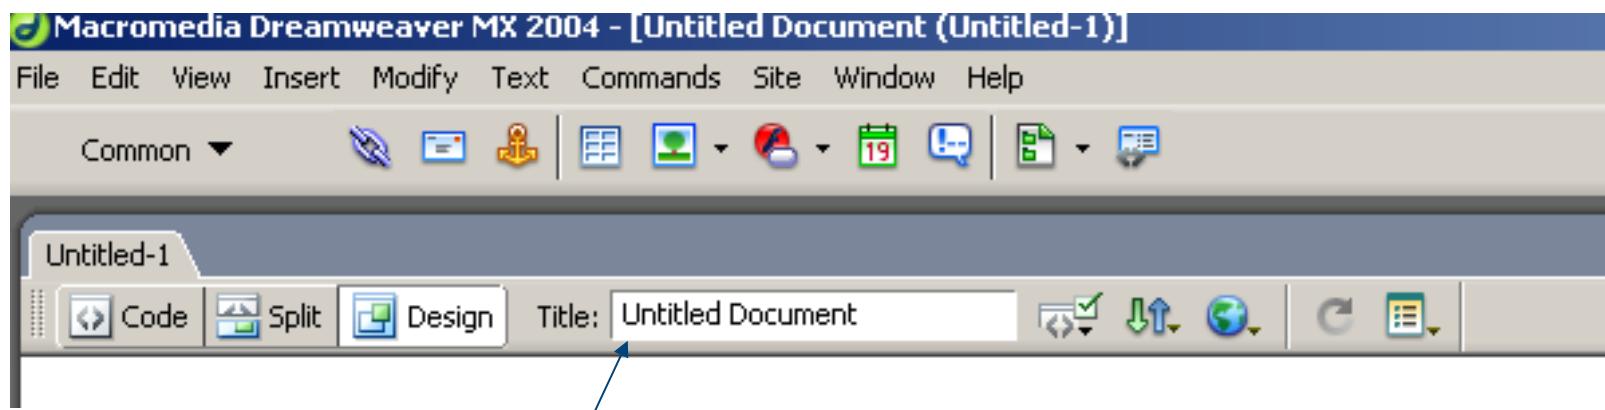

Mrs. Johnson  
Web Design

# Homepage

- The home page of a Web site is the main page or starting point of the Web site.
- It's saved with the name of index.htm

# Change Page Title

- On the Document toolbar, you will see a space for Title

# Defining a website

- A web site needs to be defined before creating any Web page in Dreamweaver. A new Web site is defined by selecting Site/ New Site

# Document Views

- Web page documents are displayed in Design View by default. This is like Word, where you can just “type” without doing the code

# Views

You can change the view of the page by clicking on the first three buttons  
Code, Split and Design.

Code is the HTML tags

Split is HTML tags and the design page

Design is “what the page looks like”

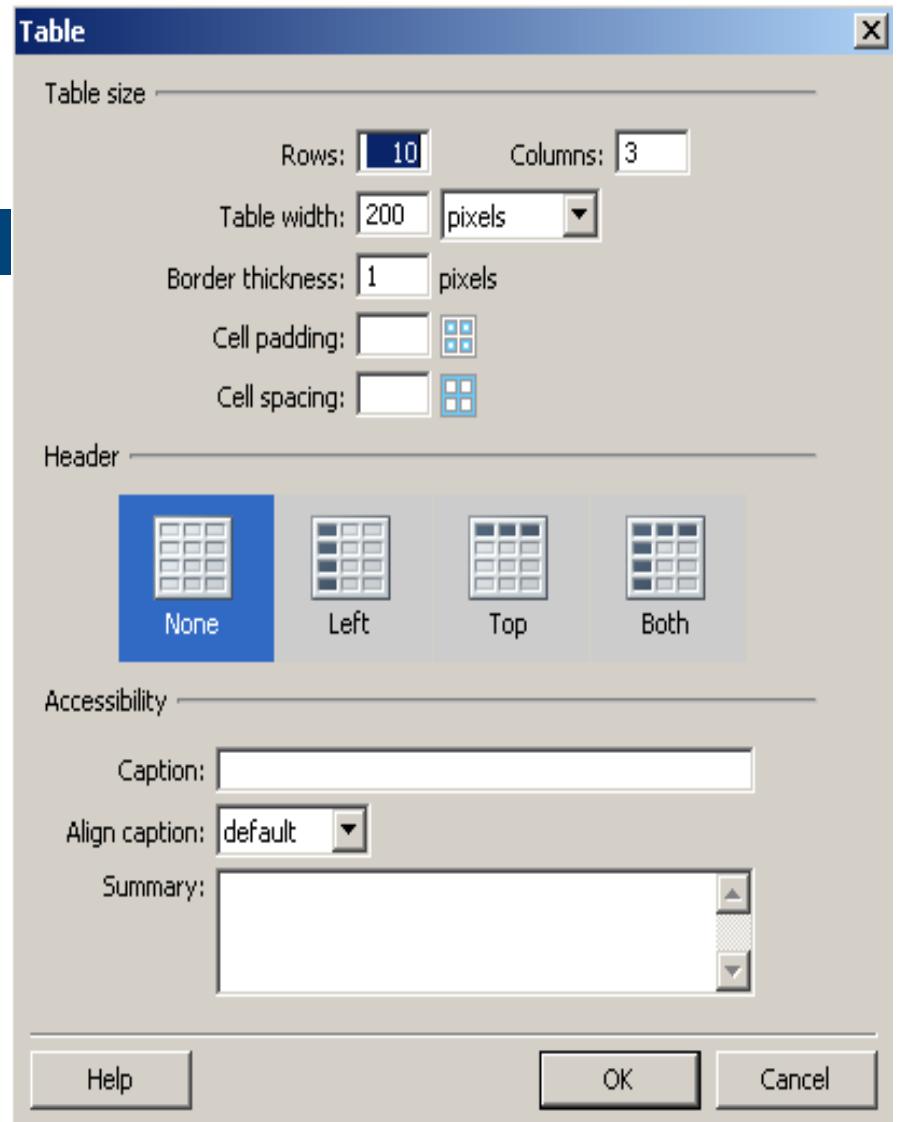

# Tables

- Tables are a great way to arrange content
- Two ways to add tables:
  - Insert/Table
  - Click on the table button on the toolbar:

# Tables

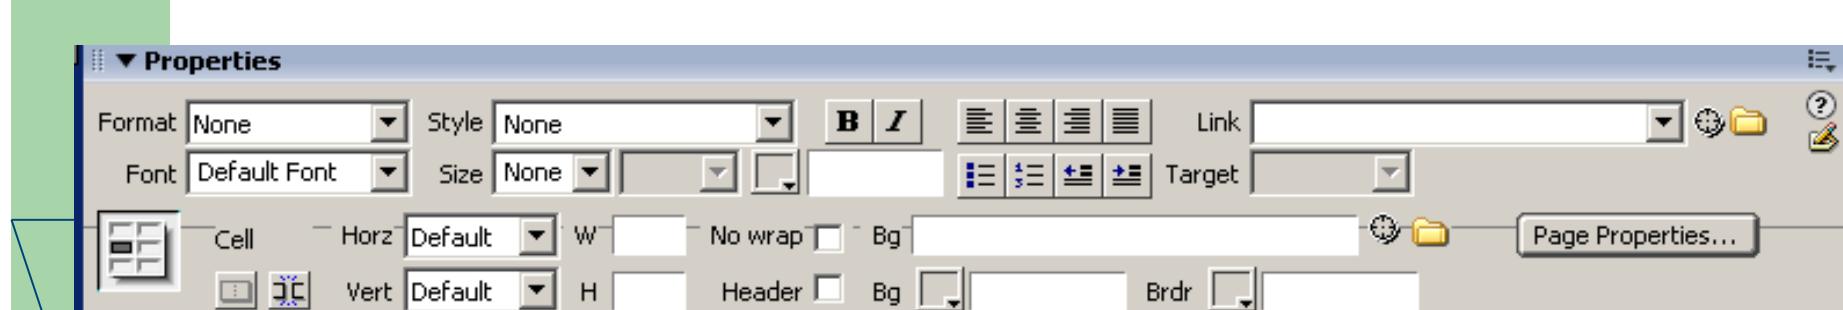

- This is the dialog box you will see when you click on the Table button
- You can decide how many rows, columns, the thickness of the border, cell padding and cell spacing

# Tables

- Borders are the lines around a table and cells
- Cell padding is the number of pixels of blank space between the content in the cell and the cell's boundary.
- Cell spacing is the number of pixels between cells.

# Table Properties Toolbar

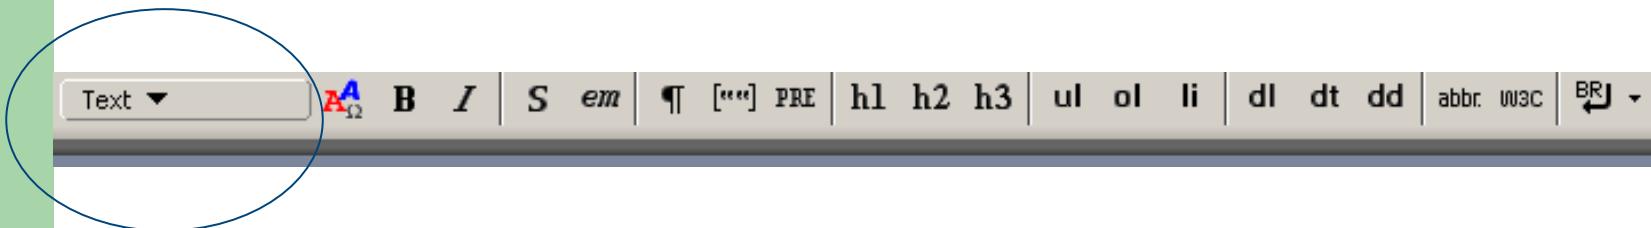

The screenshot shows the Microsoft Word Table Properties toolbar. It includes fields for Format (Format), Style (Style), Font (Font), Size (Size), Alignment (Horz, Vert), Cell height (H), and Cell width (W). There are also buttons for bold (B), italic (I), center alignment (center), and borders (Brdr). A 'Page Properties...' button is also present.

W – is the width of a cell  
H – is the height of the cell

You can change the properties of the table with this properties toolbar that automatically comes up at the bottom of the screen when you click on the table or select the table.

# Adding Text in Tables

- You put the cursor in the cell and type
- To add a break or other characters, you will need to view the Text Toolbar. You can change to the Text Toolbar by clicking at the top of the document and selecting Text.

# Spell Check

- To check spelling click, Text/Check Spelling

# Text Hyperlinks

- A hyperlink that displays a Web page document that is from the same Web site is called a document-relative hyperlink.
- You can use the Property Inspector to link to a webpage.

# Text Hyperlinks

- First you will need to select the text
- If it's a page on the Internet, you can type the web address in the LINK section on the Property Inspector
- If it's a page that you have made and you want to link it to that page, click on the File Icon  and then locate your file.
